

S - ,This patient has reoccurring ingrown infected toenails. He presents today for continued care.,O - ,On examination, the left great toenail is ingrown on the medial and lateral toenail border. The right great toenail is ingrown on the lateral nail border only. There is mild redness and granulation tissue growing on the borders of the toes. One on the medial and one on the lateral aspect of the left great toe and one on the lateral aspect of the right great toe. These lesions measure 0.5 cm in diameter each. I really do not understand why this young man continues to develop ingrown nails and infections.,A - ,1. Onychocryptosis.,
