

EXAM: , Digital screening mammogram., HISTORY: , 51-year-old female presents for screening mammography. Patient denies personal history of breast cancer. Breast cancer was reported in her maternal aunt., TECHNIQUE: , Craniocaudal and mediolateral oblique projections of bilateral breasts were obtained on mm/dd/yy. Comparison is made with the previous performed on mm/dd/yy. iCAD Second Look proprietary software was utilized., FINDINGS: , The breasts demonstrate a mixture of adipose and fibroglandular elements. Composition appears similar. Multiple tiny punctate benign-appearing calcifications are visualized bilaterally. No dominant mass, areas of architecture distortion, or malignant-type calcifications are seen. Skin overlying both breasts is unremarkable., IMPRESSION: , Stable and benign mammographic findings. Continued yearly mammographic screening is recommended., BIRADS Classification 2 - Benign, MAMMOGRAPHY INFORMATION: , 1. A certain percentage of cancers, probably 10% to 15%, will not be identified by mammography., 2. Lack of radiographic evidence of malignancy should not delay a biopsy if a clinically suspicious mass is present., 3. These images were obtained with FDA-approved digital mammography equipment, and iCAD SecondLook Software Version 7.2 was utilized.
