

S -, A 44-year-old, 250-pound male presents with extreme pain in his left heel. This is his chief complaint. He says that he has had this pain for about two weeks. He works on concrete floors. He says that in the mornings when he gets up or after sitting, he has extreme pain and great difficulty in walking. He also has a macular blotching of skin on his arms, face, legs, feet and the rest of his body that he says is a pigment disorder that he has had since he was 17 years old. He also has redness and infection of the right toes.,O -, The patient apparently has a pigmentation disorder, which may or may not change with time, on his arms, legs and other parts of his body, including his face. He has an erythematous moccasin-pattern tinea pedis of the plantar aspects of both feet. He has redness of the right toes 2, 3 and 4. Extreme exquisite pain can be produced by direct pressure on the plantar aspect of his left heel.,A -, 1. Plantar fasciitis.,
