

REASON FOR EXAM: , Followup for fetal growth. ,  
,INTERPRETATION: , Real-time exam demonstrates a single  
intrauterine fetus in cephalic presentation with a regular  
cardiac rate of 147 beats per minute documented. ,FETAL  
BIOMETRY: ,BPD = 8.3 cm = 33 weeks, 4 days,HC = 30.2 cm  
= 33 weeks, 4 days,AC = 27.9 cm = 32 weeks, 0 days,FL =  
6.4 cm = 33 weeks, 1 day,The head to abdomen  
circumference ratio is normal at 1.08, and the femur length to  
abdomen circumference ratio is normal at 23.0%. Estimated  
fetal weight is 2,001 grams. ,The amniotic fluid volume  
appears normal, and the calculated index is normal for the  
age at 13.7 cm. ,A detailed fetal anatomic exam was not  
performed at this setting, this being a limited exam for growth.  
The placenta is posterofundal and grade 2., ,IMPRESSION: ,  
Single viable intrauterine pregnancy in cephalic presentation  
with a composite gestational age of 32 weeks, 5 days, plus or  
minus 17 days, giving and estimated date of confinement of  
8/04/05. There has been normal progression of fetal growth  
compared to the two prior exams of 2/11/05 and 4/04/05. The  
examination of 4/04/05 questioned an echogenic focus within  
the left ventricle. The current examination does not  
demonstrate any significant persistent echogenic focus  
involving the left ventricle.
