

CHIEF COMPLAINT: , Left flank pain and unable to urinate.,HISTORY: , The patient is a 46-year-old female who presented to the emergency room with left flank pain and difficulty urinating. Details are in the history and physical. She does have a vague history of a bruised left kidney in a motor vehicle accident. She feels much better today. I was consulted by Dr. X.,MEDICATIONS:, Ritalin 50 a day.,ALLERGIES: , To penicillin.,PAST MEDICAL HISTORY: , ADHD.,SOCIAL HISTORY:, No smoking, alcohol, or drug abuse.,PHYSICAL EXAMINATION: , She is awake, alert, and quite comfortable. Abdomen is benign. She points to her left flank, where she was feeling the pain.,DIAGNOSTIC DATA: , Her CAT scan showed a focal ileus in left upper quadrant, but no thickening, no obstruction, no free air, normal appendix, and no kidney stones.,LABORATORY WORK: , Showed white count 6200, hematocrit 44.7. Liver function tests and amylase were normal. Urinalysis 3+ bacteria.,IMPRESSION:,1. Left flank pain, question etiology.,2. No evidence of surgical pathology.,3. Rule out urinary tract infection.,PLAN:,1. No further intervention from my point of view.,2. Agree with discharge and followup as an outpatient. Further intervention will depend on how she does clinically. She fully understood and agreed.
