

PAST MEDICAL HX: , Significant for asthma, pneumonia, and depression.,PAST SURGICAL HX: , None.,MEDICATIONS:, Prozac 20 mg q.d. She desires to be on the NuvaRing.,ALLERGIES:, Lactose intolerance.,SOCIAL HX: , She denies smoking or alcohol or drug use.,PE:, VITALS: Stable. Weight: 114 lb. Height: 5 feet 2 inches. GENERAL: Well-developed, well-nourished female in no apparent distress. HEENT: Within normal limits. NECK: Supple without thyromegaly. HEART: Regular rate and rhythm. LUNGS: Clear to auscultation. ABDOMEN: Soft and nontender. There is no rebound or guarding. No palpable masses and no peritoneal signs. EXTREMITIES: Within normal limits. SKIN: Warm and dry. GU: External genitalia is without lesion. Vaginal is clean without discharge. Cervix appears normal; however, a colposcopy was performed using acetic acid, which showed a thick acetowhite ring around the cervical os and extending into the canal. BIMANUAL: Reveals significant cervical motion tenderness and fundal tenderness. She had no tenderness in her adnexa. There are no palpable masses.,A:, Although unlikely based on the patient's exam and pain, I have to consider subclinical pelvic inflammatory disease. GC and chlamydia was sent and I treated her prophylactically with Rocephin 250 mg and azithromycin 1000 mg. Repeat biopsies were not performed based on her colposcopy as well as her previous Pap and colposcopy by Dr. A. A LEEP is a reasonable approach even in this 16-year-old.,P:, We will schedule LEEP in the near future. Even though she has already been exposed HPV Gardasil

would still be beneficial in this patient to help prevent recurrence of low-grade lesions as well as high-grade lesions. Now, we have her given her first shot.
