

EXAM: ,Ultrasound neck/soft tissue, head.,HISTORY: ,  
Right-sided facial swelling and draining wound.,TECHNIQUE  
AND FINDINGS:, Ultrasound of the right mandibular region  
was performed.,No focal collection is identified. This whole  
region appears to be phlegmonous. It is hard to adequately  
delineate the exact margins of this region.,IMPRESSION:  
,Abnormal appearing right mandibular region has more  
phlegmonous changes. No focal fluid collection.,Had a  
discussion with Dr. xx. Consider CT for further evaluation.
